DINESHKUMAR SARAVANAN

SITE RELIABILITY ENGINEER (SRE) | AZURE | KUBERNETES | DEVOPS

Chennai, Tamil Nadu, India | +91 8870463065 | Email | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Site Reliability Engineer with 2+ years of experience supporting enterprise applications on Microsoft Azure and Azure Kubernetes Service (AKS). Experienced in incident response, service restoration, root cause analysis, SLA management, release validation and observability. Hands-on with Dynatrace, Splunk, Azure Application Insights, Kubernetes, Docker, GitHub Actions and Argo CD. Builds full-stack applications using Node.js, Express.js, React and PostgreSQL, with emphasis on containerization, environment isolation and reliable deployments.

CORE TECHNICAL SKILLS

Cloud & Containers: Microsoft Azure, Azure Kubernetes Service (AKS), Kubernetes, Docker, Docker Compose
CI/CD & GitOps: GitHub Actions, Argo CD, Git, GitHub
Infrastructure & Automation: Terraform, Ansible, Microsoft Power Automate
Monitoring & Observability: Dynatrace, Splunk, Prometheus, Grafana, Azure Application Insights, Azure Log Stream
Reliability & Operations: Incident Response, Incident Management, SLA Management, Root Cause Analysis, MTTA, MTTR, Service Restoration, On-Call Support, Post-Incident Review, Change & Release Management, ServiceNow
Kubernetes Operations: Pods, Deployments, ReplicaSets, Services, ConfigMaps, Events, Health Checks, kubectl, Container Troubleshooting
Programming & APIs: Python, Node.js, Express.js, React, Vite, JavaScript, Java, Linux/Bash, REST APIs, Postman, Swagger/OpenAPI
Databases: PostgreSQL, MongoDB
Application Development & Integration: Authentication, OTP Verification, Role-Based Access Control (RBAC), Google Maps Platform, Google Places API
Platform Engineering: Docker Compose, Environment Configuration & Isolation, Feature Flags, Audit Logging, API Caching & Usage Controls, Locality-Based Geospatial Search

PROFESSIONAL EXPERIENCE

Site Reliability Engineer (SRE) | Tata Consultancy Services (TCS) — Humana Inc. | *June 2024 – Present*

- Monitor enterprise production applications using Dynatrace, Splunk, Azure Application Insights and AKS; drive incidents from detection through resolution.
- Resolved 100+ P2/P3 production incidents through log analysis and root cause analysis, consistently meeting a 99% SLA target.
- Diagnosed performance bottlenecks and service degradation by correlating telemetry, metrics, logs and dashboards across distributed application components.
- Coordinate incident management in ServiceNow, including triage, service restoration, stakeholder communication, SLA tracking and post-incident reviews.
- Support AKS workloads through pod health checks, Azure Log Stream analysis, deployment verification and container troubleshooting.
- Validate production releases using smoke tests and REST API checks with Postman and Swagger/OpenAPI; handle change requests and post-change health checks.
- Automated an internal email workflow with Microsoft Power Automate, saving 10+ hours of manual effort per week.
- Authored runbooks and knowledge-base articles and managed certificate renewals across Azure environments.

PROJECTS

Sereno Fix | Full-Stack Repair Services Platform | *React, Node.js, Express.js, PostgreSQL, Docker*

- Developing a full-stack repair-services platform using React/Vite, Node.js, Express.js and PostgreSQL, with Docker Compose for containerized local and staging environments.
- Implemented locality-aware shop discovery with progressive 3–30 km radius search, category and service-mode matching, and separate handling of registered partners and independent businesses.
- Built backend authentication and authorization workflows, OTP verification architecture, admin role controls, feature-flag management and audit logging.
- Designed Google Maps/Places integration with separate browser and server credentials, caching and application-level API usage controls.
- Implemented environment-specific configuration and database-isolation safeguards for development and staging; staging infrastructure and external integrations remain subject to final configuration.

Employee Operations Portal | *Node.js, Express.js, MongoDB, Docker, GitHub Actions, Argo CD, Kubernetes*

- Built a RESTful Employee Operations Portal with a modular Node.js/Express backend and MongoDB; validated APIs using Postman and Swagger/OpenAPI.
- Containerized the application and database with Docker Compose, and implemented GitHub Actions CI/CD with GitOps delivery to Kubernetes through Argo CD.
- Wrote Kubernetes Deployments, Services and health probes; troubleshot pod logs, EndpointSlices and service connectivity.

EDUCATION & CERTIFICATION

B.E., Electronics & Communication Engineering — Agni College of Technology, Chennai | CGPA: 8.73
Claude Developer Foundation — Anthropic | September 2026
