

DINESHKUMAR SARAVANAN

Site Reliability Engineer (SRE) | Azure | Kubernetes | DevOps

Chennai, Tamil Nadu, India | +91 8870463065 | dineshjooy@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Site Reliability Engineer with 2+ years of experience supporting enterprise applications across Microsoft Azure and Azure Kubernetes Service (AKS). Managed production operations from incident response through resolution, including monitoring, service restoration, root cause analysis, SLA management, release validation, change management, and application troubleshooting. Worked with Dynatrace, Splunk, Azure Application Insights, Azure Log Stream, Kubernetes, Docker, Git, REST APIs, and AKS. Built a personal Employee Operations Portal using Node.js, Express.js, MongoDB, Docker, Docker Compose, GitHub Actions, Argo CD, and Kubernetes.

CORE TECHNICAL SKILLS

Cloud & Container Platforms: Microsoft Azure, Azure Kubernetes Service (AKS), Kubernetes, Docker, Docker Compose

CI/CD & GitOps: GitHub Actions, Argo CD, Git, GitHub

Infrastructure & Automation: Terraform fundamentals, Ansible, Microsoft Power Automate

Monitoring & Observability: Dynatrace, Splunk, Azure Application Insights, Azure Log Stream

Reliability & Operations: Incident Management, Incident SLA Management, RCA, Service Restoration, On-Call Support, SLA Management, PIR, ServiceNow

Kubernetes Operations: Pods, Deployments, ReplicaSets, Services, ConfigMaps, Events, Health Checks, kubectl, Container Troubleshooting

Programming & Scripting: Python Fundamentals, Node.js, Express.js, JavaScript, Java, Linux/Bash

API & Database: REST APIs, Postman, Swagger/OpenAPI, MongoDB

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) — Humana Inc. | Site Reliability Engineer (SRE) | June 2024 – Present

- Monitored enterprise production applications across Dynatrace, Splunk, Azure Application Insights, and AKS, identified service-impacting issues, and drove incidents from initial response through resolution.
- Resolved 100+ P2/P3 production incidents through log analysis, application troubleshooting, and root cause analysis (RCA), consistently meeting a 99% SLA target.
- Managed incident SLAs from response through resolution by prioritizing service restoration, coordinating technical teams, tracking timelines, and communicating status to stakeholders.
- Led end-to-end incident management in ServiceNow, covering incident triage, service restoration, resolution, stakeholder communication, SLA tracking, and post-incident reviews (PIRs).
- Diagnosed performance bottlenecks and service degradation by correlating telemetry, metrics, logs, and monitoring dashboards across distributed application components.
- Supported production workloads on Azure Kubernetes Service (AKS) by performing pod health checks, log analysis, deployment verification, and container-level troubleshooting.
- Validated production releases through post-deployment health checks, smoke testing, REST API validation, and application health verification using Postman and Swagger/OpenAPI.
- Handled production Change Requests (CRs) and Emergency Change Requests (ECRs), coordinating approvals, implementation activities, validation, and post-change health checks.
- Collaborated with development, infrastructure, database, and support teams to investigate production issues, restore services, and prevent recurrence through documented corrective actions.
- Performed real-time Azure Log Stream analysis to troubleshoot application behavior, runtime errors, and service issues during production incidents.
- Managed certificate renewal activities across Azure environments to maintain secure application connectivity and avoid certificate-related service disruptions.
- Automated an internal email workflow using Microsoft Power Automate, eliminating more than 10 hours of manual effort per week.
- Authored operational runbooks and knowledge base documentation to standardize troubleshooting and reduce resolution time for recurring incidents.

PROJECT

Employee Operations Portal | Node.js | Express.js | MongoDB | Docker | GitHub Actions | Argo CD | Kubernetes

- Built a RESTful Employee Operations Portal using Node.js, Express.js, and MongoDB with a modular MVC-based backend structure.
- Developed and validated REST APIs using Postman and Swagger/OpenAPI, including request validation and application troubleshooting.
- Containerized the application and database using Docker and Docker Compose, configuring application networking and persistent storage.
- Implemented a GitHub Actions CI/CD pipeline to automate application build, test, and deployment stages.
- Implemented GitOps-based Kubernetes deployment with Argo CD, synchronizing Kubernetes manifests from Git for declarative application delivery.

- Created Kubernetes manifests for application deployment and orchestration using Pods, Deployments, Services, configuration, and health validation.
- Deployed and troubleshooted the application on Kubernetes by analyzing pod logs, Services, EndpointSlices, service connectivity, port-forwarding, and in-cluster requests.
- Validated application behavior after deployment and resolved application-level and Kubernetes networking issues through structured troubleshooting.

EDUCATION

B.E., Electronics & Communication Engineering — Agni College of Technology, Chennai | CGPA: 8.73

CERTIFICATIONS

Python Fundamentals for Beginners — Great Learning Academy | May 2022

Claude Developer Foundation — Anthropic | September 2026
